Dear Mr. Lee:

SKF Needle Bearings Division (formerly known as Bremen Bearing Corp.) is currently operating three surface impoundments at our plant in Bremen, Indiana. These impoundments handle waste water from several tumbling operations.

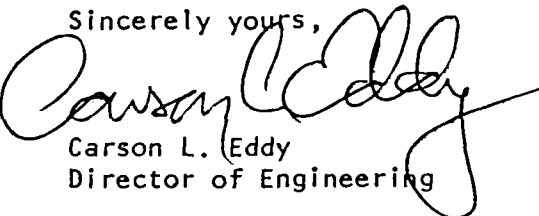

It is our intention to install a water treatment system which will enable us to close these impoundments and either recycle the process water or discharge directly to the Bremen Municipal Sewer System. We have made a Preliminary Engineering Study for the treatment system.

A copy of this study is enclosed for your review and comment. We would be happy to discuss our plans with your office and answer any questions which you might have. By copy of this letter and the report to Messrs. Brumfield and Lamm, we are also inviting their comments and questions.

We are ready to begin the final engineering design on this project, and would like to move it ahead as rapidly as possible. We are looking forward to hearing from you.

Thank you for your help.

Sincerely yours,

Carson L. Eddy
Director of Engineering
